I.R.E.S.

Italian Rice Experiment Station

A professional platform for high quality rice production!

Developing new varieties requires time, commitment, machineries and competences.

IRES offers tools and supports during all the steps from developing an idea at experimental level to its implementation at the commercial level in Italy and in all the Mediterranean area. Successful results are obtained in short time thanks to IRES's facilities, experimental equipments, innovative approach, international partners and, moreover, for the strong passion and long-lasting experience.

Call me or write me for further information.

Rice breeding for plant types and traits

Variety development

Cultivation in counter-season in South-America

Nematode control and purity selection of elite seed lots

Registration, Classification and Protection of new varieties in Italy and EU

Yield and observational trials in Italy and abroad

Market analysis, strategic positioning and commercialization of rice varieties in Italy and abroad
